

Garden Seed from Glasnevin for 2017

CULTIVATED PLANTS

Seed collected in 2016 from plants growing in the National Botanic Gardens, Glasnevin.

Haec semina de herbis in Horto Botanico cultis in anno 2016 collecta sunt.

THE NATIONAL BOTANIC GARDENS, GLASNEVIN, is situated 53° 22' 15" N latitude, 06° 16' 16.4" W longitude at approximately 20 m altitude. The annual mean temperature is 9.8 °C, mean January minimum temperature is 1.7 °C (absolute minimum -18.5 °C on 12 January 1982) and mean July maximum temperature is 19.3 °C (absolute maximum 27.8 °C) for the period 1961-1990. Mean annual rainfall is 724 mm.

Numbers in left-hand column are seed list numbers and should be used to request seed. Numbers in right-hand column (e.g. **V.Gibbs, XX-0-DBN-1931.011658**) are the original source garden where known followed by the IPEN number. The latter part (i.e. 1931.011658) represents the accession number used in the National Botanic Gardens; if available, further particulars of the provenance of these plants can be provided on request. Those numbers with an XX, or otherwise lacking source information are of uncertain provenance.

IPEN is a registration system open for Botanic Gardens that have adopted a common policy (Code of Conduct) regarding access to genetic resources and sharing of the resulting benefits with the country of origin. The number ensures that plant material being exchanged between Botanic Gardens can be tracked so as to ensure compliance with the Access and Benefit-Sharing regulations of the CBD. It aims to create a climate of confidence between the countries owning the genetic resources and Botanic Gardens.

Please download an order request form from our website.

N.B. Only gardens that are part of the seed exchange programme with the National Botanic Gardens will have their requests honoured.
